

NEW STAYPUT™ Products

*Registered Designs

The **Updated Stayput™ *Shock Cord Loop** introduces a more refined finish to an already successful product from Stayput™. Since its introduction in 2002 the Stayput™ Shock Cord Loop has established itself as a popular alternative in the market with many customers appreciating the quality materials, simple installation, superior holding power and reliability it brings to the market. The unique and innovative design of the Stayput™ Shock Cord Loop has been improved & it has had a facelift. The best Shock Cord Loop on the market has just become even better & easier to use.

The **New Stayput™ *Shock Cord Knob & Cap** brings to the market a dressed up version of the existing Stayput™ Shock Cord Knob. This new model has a carefully designed deeper countersink to maintain structural integrity whilst providing a recess to accommodate a new cap. The cap has been designed to allow clearance underneath for a range of screws or rivets. It fits neatly into the recess to conceal whatever fixing has been used.

The **New Stayput™ *Dome Hook Saddle** introduces an additional fastening solution to that offered by the existing two Stayput™ Dome Hook models. The Stayput™ Dome Hook Saddle is designed to be used with a hook and strap, specifically the stainless steel Saint® Marine Canopy Strap Hook and 25mm webbing but will also work with other hooks on the market. The new Stayput™ Dome Hook Saddle offers the same great features and simple installation as the existing Dome Hooks but allows for a more robust, non elastic anchoring method to be used.

The **New Stayput™ Spin Cut Tool 13mm** adds a larger size to the popular Spin Cut Tool lineup which includes 4, 5, 6, 9.5 & 11mm tools. The new 13mm size tool suits #7 eyelets. Once you have used a Spin Cut Tool you will wonder how you got by without one. A great addition to your kit, just try one in webbing!!!
