

STAYPUT™ FASTENERS

HORIZONTAL, VERTICAL & CANVAS TO CANVAS

These 3 original Stayput™ Fastener models have been a part of the industrial fabric industry since the 1950's. Their popularity and success can be attributed to their clever design and simplicity. With no parts to corrode or jamb they are the no fuss yet strong, effective & reliable fastening solution that has been proven over decades of service in our harsh Australian environment. Originally designed and perfectly suited to marine use, they are now utilized in many and varied applications worldwide.

- The Stayput™ **Horizontal** and **Vertical** models are for fixing fabric to a rigid structure such as a boat, building or vehicle. They are both available as a single or double to accept either one or two #4 eyelets or grommets with approx 9.5mm inside diameter. They are best secured using a 6g countersink screw or a 3mm (1/8") pop rivet.

- The Stayput™ **Canvas to Canvas** models are mainly used to secure roll up openings in auto or marine covers and roll up awnings around buildings etc. They are also available as a single or double to accept either one or two #4 eyelets or grommets with approx 9.5mm inside diameter. The Canvas to Canvas are simply installed into the fabric using the supplied nut through a 6mm (1/4") hole. When used for securing a roll-up opening, a strap with an eyelet installed must be fitted to the top inside of the cover using the supplied nut. Once the opening is rolled up the strap is looped under the roll and the eyelet secured over the post and tongue.

CURVED BASE ADAPTOR

The Stayput™ Curved Base has been designed to fit neatly to the back of our Horizontal and Vertical singles or doubles. It provides a neat and firm fit when installing either of these fasteners on a tube or railing with a diameter of 22 – 25mm.
