

Stayput™ Fasteners Australia

for a secure & corrosion free fastening solution

All Nylon **Stayput™ Fasteners** are manufactured in *AUSTRALIA* from high quality UV stable Nylon Composite and Nickel Plated Brass components. The unique design of the original 3 Stayput models (*Horizontal, Vertical & Canvas to Canvas*) provide a superior & reliable fastening system without the need for springs or pressure to remain securely closed. All Stayput Fasteners are resistant to corrosion providing many years of trouble free operation and are particularly suited to a marine environment.

Stayputtm Horizontal Fastener

Our most popular model, the **Stayputtm Horizontal Fastener** is a very universal product. It is designed to attach fabric to most solid structures. The double model is designed to accept 2 layers of fabric (2 eyelets). Both the single & double versions of this fastener have a nickel plated brass tongue and are available in Black and White. Suits #4 eyelets.

Stayputtm Vertical Fastener

While the **Stayputtm Vertical Fastener** can be used similarly to the Horizontal model, it is specifically designed to attach to narrow vertical structures such as posts. When used on vertical edges of fabric, the vertical model will be better hidden. The double model is designed to accept 2 eyelets. Both the single & double versions of this fastener have a nickel plated brass tongue and are available in Black and White. Suits #4 eyelets.

Stayputtm Canvas-to-Canvas Fastener

The **Stayputtm Canvas-to-Canvas Fastener** is designed to attach 2 overlapping sections of fabric. This model is widely used to secure rolled up openings in fabric covers or walls. It is fixed through one section of fabric with the supplied nut. The double model is for situations where 3 overlapping pieces of fabric need to be fastened. Both versions of this fastener have a nickel plated brass tongue and are available in Black and White. Suits #4 eyelets.

Stayputtm Curved Base Accessory

The **Stayputtm Curved Base Adaptor** is designed to be used when installing either a Stayput Horizontal or Vertical fastener to a 22-25mm tube as found on boat bimini tops and railings. The Stayput Curved Base provides a secure and neat fit when used in this application.

Stayputtm 'Stainless Steel' Fasteners

Both **Stayputtm Horizontal Single & Double Fasteners** and **Stayputtm Vertical Single & Double Fasteners** are now available in '316' Stainless Steel. While they serve the same purpose as the long established and proven Nylon models, the **Stainless** versions are for those who prefer the appearance and added strength of Stainless Steel. Suits #4 eyelets.

Stayputtm Wide Flange Screw & Nut

The **Stayputtm Wide Flange Screw & Nut** is used to fasten 2 layers of fabric together in a semi permanent fashion without the use of eyelets. The Wide Flange Screw & Nut is effectively a nylon nut and bolt with a built in washer. Use 6mm Spin Cut Tool to make hole.

Stayputtm Spin Cut Tool

The **Stayputtm Spin Cut Tool** is, as the name suggests, designed to spin and cut holes in most fabrics. The five sizes available are matched to the holes required by the Stayput Press Clip (5mm), Shock Cord Loops, Marquee Hooks, Rope Track Slides (6mm) and # 4 Eyelets (9.5mm). The 4mm will suit metal press studs. Simply use your battery drill to neatly cut holes in fabric.

Stayputtm Shock Cord Loop

The **Stayputtm Shock Cord Loop** is available in 5 standard lengths 70, 80, 90, 100 & 110mm in Black or White. 150, 200, 250 and 350mm length loops are also available in Black only. Our unique design has several key benefits which make Stayput Loops the best and most versatile on the market. Use 6mm Spin Cut Tool to make hole.

- Simple installation in varying thicknesses of fabric without the need for any special tools.
- Superior holding power in the fabric and reduced risk of tearing out due to greater contact area with the fabric.
- Unique brass machine pressed crimps on the cord will not rust or pull off.
- The fitting can be removed & re-fitted without damage to the fabric.

Stayputtm Shock Cord Knob

The **Stayputtm Shock Cord Knob** is designed to accept up to 6mm shock cord. The knob is extremely strong with a smooth and rounded matt finish. As with all other Stayput products, it is also available in Black or White, and is ideal for use with the Stayput Shock Cord Loop.

Stayputtm Marquee Hook

The **Stayputtm Marquee Hook** is designed to hang marquee/tent walls from a rope or wire. It is simply fixed directly to the fabric using the supplied backing plug and does not require the use of an eyelet or any special tools. As with the Shock Cord Loop, the Marquee Hook can also be removed and re-fitted without damaging the fabric or the hook. For hole use 6mm Spin Cut Tool.

Stayputtm Lashing Hook

The **Stayputtm Lashing Hook** combines several key features which set it apart from others on the market. This hook is best suited to use with 8g countersunk screws and is available in Black & White. The hooks main features are:

- Smooth rounded surfaces with no sharp edges to cut into the rope or elastic cord.
- A narrower opening at the end of the hook which allows the rope or cord to snap into position reducing the chance of it slipping out if it becomes slack. This is particularly helpful when using rope.

Stayputtm Nylon Hook

The **Stayputtm Nylon Hook** is designed to be fixed to fabric through a #4 eyelet. This hook is then passed through another #4 eyelet from which it hangs. The hook's profile is such that it clips securely into the eyelet.

Stayputtm Rope Track Slide

The **Stayputtm Rope Track Slide** has been designed to slide freely within an aluminium rope track. It is easily installed in the fabric through a 6mm hole with no special tools required and has no moving parts to cause trouble. The ball slides in the track allowing the fitting to turn and the fabric to concertina, providing easy opening of any curtain or wall suspended from the track. The Stayput Rope Track Slide brings to the market a simple and cost effective method of installing a curtain system in a variety of applications. For hole use 6mm Spin Cut Tool.

Stayput™ Dome Hook

Registered Design

The **Stayput™ Dome Hook** is the latest addition to the Stayput Fastener range. The Dome Hook's low profile minimizes the risk of being a tripping hazard when not in use making it ideal for use where children play or in high foot traffic areas, while still providing a secure anchor point when required. The **Stayput™ Dome Hook** suits the **Stayput™ Shock Cord Loop** and is available in Horizontal or Vertical models. The Horizontal suits sand pits or pool covers while the Vertical suits drop blind applications. Both models are available in Black, White, Ivory, Cement, Clay, Green & Terracotta to suit most situations.

Stayput™ Press Clip

Registered Design

Comprising of a Cap, Stud & Base, the **Stayput™ Press Clip** is the **corrosion free** alternative to conventional metal press studs / durables. It has been designed primarily for marine use where fabric needs to be attached to a solid surface, but is also suitable for use in many other applications.

- All 3 components are manufactured entirely using UV stabilized nylon compounds and are available in black and white as standard. The cap is also available in Navy & Royal Blue, Light Grey, Beige and Burgundy to match popular marine fabrics.
- The cap & stud are installed by simply squeezing the parts together through a 5mm hole in the fabric. The base is fixed using either a 6g countersunk screw or a 3mm (1/8") pop rivet.
- A hand tool or inserts for a press n snap tool are available for installing the cap & stud.
- The Stayput Press Clip will not cause electrolysis or seize in marine environments thus eliminating possible damage to your boat or covers through corrosion.
- The Stayput Press Clip, when used in conjunction with the superior holding power & security of the Stayput Horizontal, Vertical or Canvas to Canvas fasteners, now offers a totally corrosion free and secure fastening solution.
