

STAYPUT™ ROPE TRACK SLIDE

The **Stayput™ Rope Track Slide** has been designed for use with a standard (widely available) aluminium rope track. The Stayput™ Rope Track Slide is a simple design with no moving parts. It was developed for use where the customer requires a strong, simple, trouble free solution for hanging an industrial fabric curtain / wall, with the ability to concertina the curtain / wall & open it up the without the need to remove it completely, much like a domestic curtain.

Applications for the Stayput™ Rope Track Slide include industrial screens and curtains found in Factories, Workshops, Cafés, Domestic Pergolas / Enclosures, Tents / Marquees, Commercial & Military Vessels etc.

The Stayput™ Rope Track Slide is attached directly to suitably reinforced fabric by simply tapping the backing plug through a hole in the fabric and into the back of the fitting. The pinching effect of the backing plug on the fabric helps hold the Track slide firmly in place. Suitable for use in fabric up to about 2.7mm thick, depending on the stiffness of the fabric.

Key features and benefits of the Stayput™ Rope Track Slide are:

- Simple to install
- No moving parts to jam or seize
- Standard rope track is widely available
- Allows fabric to concertina
- Manufactured using UV stabilized nylon compounds
- 100% corrosion free
- Available in Black & White
